Michell's Superb Asters

SPECIAL NOTE.—In growing Asters, old soil and flats should never be used the second time without thoroughly sterilizing, to avoid the numerous diseases to which Asters are so susceptible. Barnyard manure should never be employed as a fertilizer. We recommend the use of finely ground bonemeal. Asters should not be grown in the same location two years in succession.

Fusarium-Wilt Resistant Strains

These we believe to be practically immune to this disease. We believe that by using this seed many disappointments due to crop failures will be eliminated.

NOTICE. Double Petunias are a highly bred type, and the seed is not as vigorous in growth as that of single strains. Seed of all our Double Petunias has been carefully tested in soil, and the germination has been found to average 70 to 80 per cent. For this reason, and because of its high cost, we cannot entertain claims on non-germination of this seed, or requests for replacements. If carefully handled we know the seed will grow.

A beautiful free-flowering annual with fern-like foliage. The daisy-like flowers are a beautiful lavender-blue color and grow on good long stems, which make them splendid for cutting. Spring-flowering Sweet Peas

NEW CUTHBERTSON STRAIN

For greenhouse sowing between October and February, this new strain is superior to the early or winter class. While the stronger growth makes them a week or 10 days later flowering, they are generally longer stemmed and last longer into the spring than the weaker-growing earlies. They are also excellent for outdoor planting, being very resistant to hot weather. Seed sown this past spring in early March produced plants that remained in good bloom until the middle of August.

Coline. Vivid, intense scarlet.

Evelyn. Extra long stemmed. Soft salmon-pink.

Frank G. Fine soft rosy lavender. Named for the originator of the new Cuthbertson strain.

Dwarf Upright, Michell's Exhibition

We offer a new strain which is the result of many years' work of careful selection. The plants are of dwarf upright habit and well branched, producing many large flower-heads. Individual florets have clear distinct eyes and come in a range of fine bright florist colors. This is an excellent mixture and a very fine strain for pot-plants.

Trade pkt. 75c; 1/4oz. \$1.50; oz. \$5.00

HYBRID GRANDIFLORA

GIANT SALMON QUEEN. New bush type. Here is a new type of Verbena well worth featuring. The plants grow more erect, making a broad, flat-topped, bushy plant about 8 to 10 inches high and 12 to 15 inches across. The flower-heads are large and well filled with large, broad-petaled florets of an unusually pleasing shade of bright salmon-pink, each with a small white eye. Besides its many advantages as a border plant, the 8 to 10-inch, straight stems and its attractive color make it very desirable for bouquets.

Trade pkt. 50c; 1/4oz. \$1.00; oz. \$3.50

ANNAPOLIS BLUE. The first mid-blue in Verbena without any tendency to have a purple cast to the florets—a real deep Bella-donna-blue. A strong, husky grower with large trusses of 3-inch flowers.

The color shades from clear rose-pink to rose-red, making this the brightest rose Verbena ever produced from seed. The individual florets measure over 1 inch in diameter. Originator's Stock Seed.

Crimson Glow. The finest and deepest red made available in this popular garden flower—a rich glowing crimson. The flowers form a solid mass of color.

Withstands blight and other Celery diseases far better than most strains.

LETTUCE

One ounce will produce about 2500 plants

Heading Varieties

Oz. 35c; 1/4lb. 90c; lb. \$2.75

Big Boston. 75 days. A large, flat, cabbage-headed variety for mid-summer or fall use, or under glass in the early spring and autumn. Light green, tinged light brown on the outer leaves.

Oz. 20c; 1/4lb. 65c; lb. \$1.75

Great Lakes. 82 days. Bronze Medal, 1944 All-America Selections. A decidedly crisp heading Lettuce of the Imperial type. It is of excellent quality and exceedingly sweet and tender. A superior summer Lettuce that stands heat and sun and is exceptionally resistant to tip-burn injury. Very slow to shoot to seed. It does equally well in cool weather and will produce large solid heads.

1/2oz. 35c; oz. 65c; 1/4lb. \$1.90; lb. \$5.50

Iceberg. '84 days. Solid, cabbage-like heads; leaves curly, slightly tinged red.

Oz. 25c; 1/4lb. 75c; lb. \$2.00

Imperial No. 44. 82 days. This variety has very long, well-folded leaves and produces hard well-formed heads appreciably less susceptible to tipburn than other varieties.

Oz. 35c; 1/4lb. \$1.00; lb. \$3.00

Does best in the latitude of Philadelphia as an early spring and late autumn crop. We offer a fine strain of seed.

Oz. 30c; 1/4lb. 85c; lb. \$2.60

Loose-Leaf or Cutting Varieties

Black-Seeded Simpson. 46 days. Ideal for midsummer use as it withstands heat and drought.

Oz. 20c; 1/4lb. 65c; lb. \$1.80

Grand Rapids. 43 days. The leading variety in this class for forcing under glass, but it may also be grown successfully outdoors. Leaves curly, crisp and brittle; fine flavor. We pay particular attention to the seed-stock, therefore offer a strain of especial merit.

Oz. 20c; 1/4lb. 65c; lb. \$1.80

Oak Leaf. 45 days. A very novel, beautiful golden green Lettuce of fine form and valuable because it is remarkably slow to shoot to seed. Makes attractive loose-leaf heads during the hottest summer weather; no other variety grows so well at that time of the year. The leaves are broad, deeply lobed like an oak leaf, thick, succulent, and tender.

Oz. 35c; 1/4lb. 85c; lb. \$2.50

Slobolt. 45 days. A new non-heading variety that is very slow to develop seed-stalks in hot weather. Especially desirable for home-garden use.

1/2oz. 40c; oz. 70c; 1/4lb. \$2.25

PARSLEY

One ounce will sow 150 feet of row; 5 pounds, an acre

Oz. 20c; 1/4lb. 40c; lb. \$1.15; 5 lbs. \$5.50; 10 lbs. \$11.00

Double Curled or Covent Garden. 70 days. Nicely curled leaf which retains its green color the entire season. Best variety for the market garden. The seed we offer is imported and will produce more densely curled leaves than American-grown seed.

Oz. 20c; 1/4lb. 40c; lb. \$1.15; 5 lbs. \$5.50; 10 lbs. \$11.00

PEPPERS

Our connections with the most reliable producers in this country and abroad place us in a position of advantage for our supplies, chiefly because of the large volume of Grass Seed for which we contract.

We are always pleased to submit samples, with prices, for comparison and let our customers be the judges.

Gloriosa superba Rothschildiana

This handsome African tuberous-rooted plant, known as the "Climbing Speciosa Lily," has been used mostly as a greenhouse climber, but can be grown very successfully as an outside climber if given a warm, sunny location. It reaches a height of 6 to 8 feet and produces large, gorgeous, lily-like flowers which open bright yellow, but change to a deep scarlet.

Tigridia Pavonia • Mexican Shell-flower

An excellent flowering bulb for the garden, known as the "Tiger or Shell Flower." Colors vary from pure white to gold and vivid scarlet—all deeply blotched and speckled with crimson-maroon. Plant in May, 6 inches apart and 3 to 6 inches deep. They require treatment similar to gladiolus.

Montbretias, Giant-flowering Varieties

Montbretias resemble miniature gladiolus, are fine for cutting, and excellent for border planting. They prefer a light, loamy soil, well enriched with leaf-mould, but no manure or chemical fertilizer should touch the roots; a little bonemeal and a light top-dressing of lime should prove beneficial. They will thrive either in partial shade or full sunlight, but see that the moisture supply is good at all times.

Croft Lilies (October–November)

The Croft has proved itself one of the finest and most satisfactory of the Easter Lilies. It is dwarf in habit, similar to *L. giganteum*. A sturdy plant with luxuriant foliage, it is free flowering, with enormous, well-developed blooms of long lasting quality.

Lilium Creole, Certified (September–October)

A most desirable variety for Easter pot-plants and for cutting purposes. Plants are strong and erect and will grow very satisfactorily in a cool temperature. Free blooming, with large waxy flowers on tall erect stems. Forces in ten to eleven weeks.

Lilium Mexican (October–November)

This type of Lily is becoming more and more popular each season. It is a tall grower and superior for cutting purposes. Prices on this variety will be within reach of all florists. These bulbs keep in cold storage very well and will be available for late plantings.

Lilium Howardi (July–August)

This Lily is a "Product of Bermuda." Plants grow tall and erect, with many blooms. Can be brought into bloom earlier than *L. Harrisi*. Flowers are firm and well suited for shipping.

Lilium Harrisi (Michell's Special Brand) (July–August)

The cream of the Bermuda Lily crop, this variety is fine for Easter sales and still a favorite with many florists. Sizes and quantities are the same as *L. Howardi*.

IMPORTANT: All Lily bulbs will be shipped on arrival of new crop unless otherwise desired. Therefore, we suggest that orders for Lily bulbs be placed as early as possible, stating the shipping dates you desire, in order that we may make special provision for your requirements.

MICHELL'S SPECIAL BRAND LILY BULBS

Suggestions in Connection with the Growing of Hardy Lilies Under Glass

Hardy Lilies should be grown cool and given 16 to 18 weeks from time of planting to bring them into bloom, so the best results can be obtained; in fact, if you can give them longer to come into flower it is better. Where they are forced with plenty of heat, the result is that you get good foliage with not so many early blooms.

POPULAR VARIETIES OF HARDY TYPE LILY BULBS (November)

1948 INTRODUCTIONS

CONSTELLATION

(Yoder Bros., Inc.)

A yellow decorative that flowers naturally November 5. The two outstanding features of this variety are its uniformity in response to black cloth shading and its dependability as a high producer of quality flowers. Constellation has consistently yielded as high as the most productive of the commercial varieties. With the use of light and shade we recommend this variety for flowering from May 5 to November 15. **\$8.00 per 100**

SENECA

(Yoder Bros., Inc.)

An orange-bronze decorative blooming normally November 1. The earliest bronze pompon in the cloth-house shading program. It holds its color well, is a better producer than Navaho and is the most reliable bronze pompon for early shading. **\$8.00 per 100**

TALLY-HO

(Yoder Bros., Inc.)

A yellow intermediate pompon that blooms naturally November 15. A quality pompon very similar in many respects to Princeton and complements this variety. A clear yellow, well-rounded, hard pompon. **\$8.00 per 100**

YELLOW QUEEN

(Yoder Bros., Inc.)

A yellow sport of Orchid Queen that blooms normally November 10. Highly recommended for natural flowering and delayed flowering into Thanksgiving season by the use of artificial light. **\$8.00 per 100**

THREE NEW GARDEN VARIETIES

SPELLBOUND

(Yoder Bros., Inc.)

A lavender-pink decorative normally blooming September 25. A striking 3-inch decorative that combines the beauty and grace of Lavender Lady with the durability and substance of Jean Treadway. Spellbound captivates the eye with its gloss and finish derived from Burgundy. The plant is a solid, compact bush attaining a height of 24 inches. The characteristic, uniformly planned flower development contributes to a wonderfully showy mass effect that cannot fail to greatly enhance the early fall garden. The habit of growth is equally ideal for pot-plant culture. **\$8.00 per 100**

HONEYCOMB

(Yoder Bros., Inc.)

A yellow pompon blooming naturally September 25. A small, perfectly formed pompon of intense golden yellow. The flowers are borne on well-formed sprays, nearly ideal for cut flowers on 18 to 22-inch stems. Honeycomb is a marked advance over the widely grown and well-known Early Yellow and Pomponette in that the habit of growth is more vigorous and productive, the flowering season is equally early, and the quality and color of the flower is such as to closely rival many greenhouse-grown counterparts. Honeycomb will shape up to a fine pot plant or add a distinctive note of formality and rich color to the fall garden scene. **\$8.00 per 100**

SERENITY

(Yoder Bros., Inc.)

A white daisy that blooms naturally September 25. The major requirements of a good garden Chrysanthemum are early, showy flowers borne on rigid, compact, bushy plants. A degree of resistance to frost, winter kill, insects and diseases is equally desirable. Serenity combines all of these qualities plus a uniformity of growth and flowering seldom exceeded by an outdoor Chrysanthemum. It is a beautiful creamy white, heavily petaled daisy that opens rapidly to a real show of literally hundreds of blooms. As a pot plant, it resembles the bushy compactness of Judith Anderson and Pomponette. The shapely plant, because of its strength and rigidity, makes a beautiful border or low hedge. **\$8.00 per 100**

Panamiga

The leaves, of metallic gloss, change in color from olive-green to purplish bronze and are crinkled and hairy. The graceful flowers resemble fine white lace; they appear on the end of the little branches and partly cover the upper leaves. Panamiga has a very neat and compact growing habit and makes salable plants in record time.

Neponset Paper Pots

Green—For Growing

This new development makes it possible to take advantage of the economy, ease and convenience of Paper Pots for the full growing period of young plants without any damaging or retarding of root-growth. The special water-proofing treatment of these Pots seems to encourage healthy growth; not necessary to use clay pots.

Red Paper Pots

Neponset Red Pots protect against root ball breakage, prevent drying out in transit, reduce setback to plants after transplanting, provide quicker resumption of growth, allow growers to reestablish plants with less care and attention, help toward earlier maturity and harvest, and result in higher prices.
